# Confirmations Management

Centralized confirmations through one connection.

Confirmations Management normalizes a bank's swap confirmation into a centralized client-facing UI [other assets to be added in phase 2].

It provides clients with a choice of methods to accept or reject the confirmations:

- Manually in UI
- Via match of client data
- Via response to emailed confirmation data

The system allows for configurable data sets per bank/client/asset as well as catering for positive or negative affirmation.

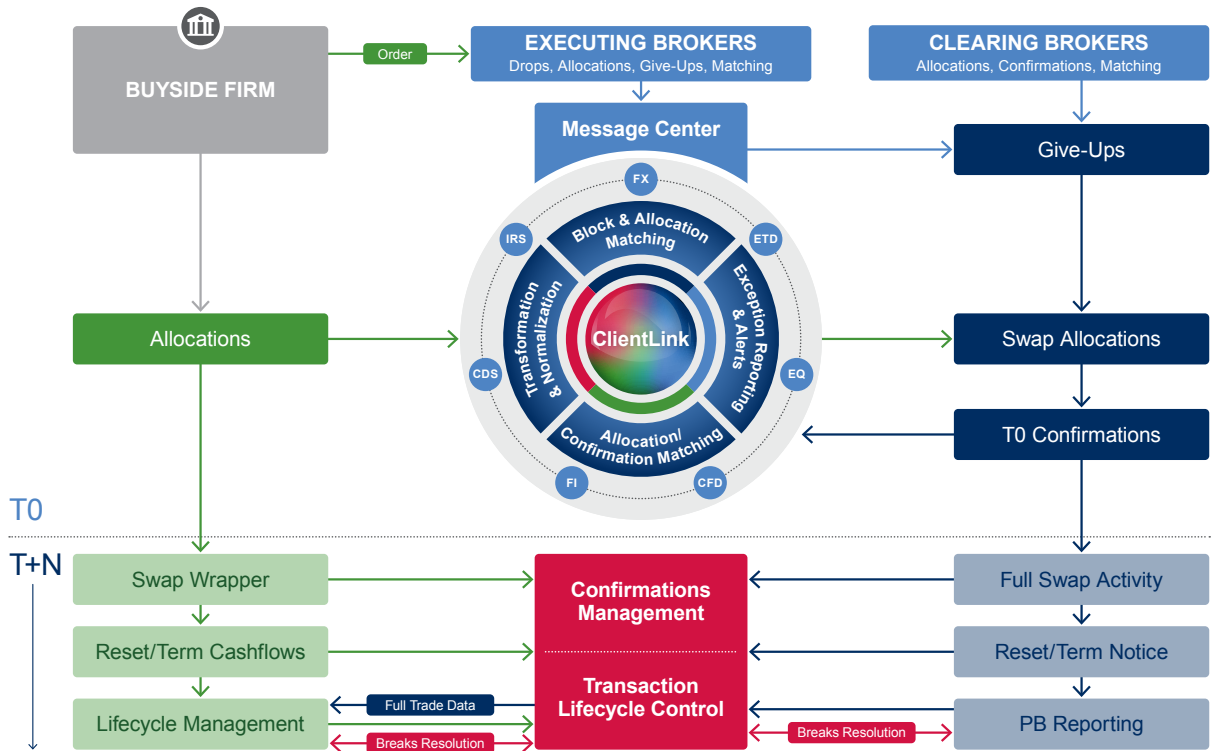

A bank may also share UIT information and full connectivity is available to the TR Connect product for regulatory reporting.

The solution reduces cost, operational resource requirements and the risk of error, by transforming manual processing of Broker confirmations into an exception-based workflow.
