

Traiana™

In the middle of the markets, at the heart of innovation.

Data Translation Center

Automated file translation through one connection.

Data Translation Center is the format-agnostic messaging and normalization solution that enables seamless communication for all members of the global financial community. Market participants can now capture, transform and normalize cross-asset counterparty data into their preferred file type, with output delivered directly to the middle office as part of an automated and efficient workflow.

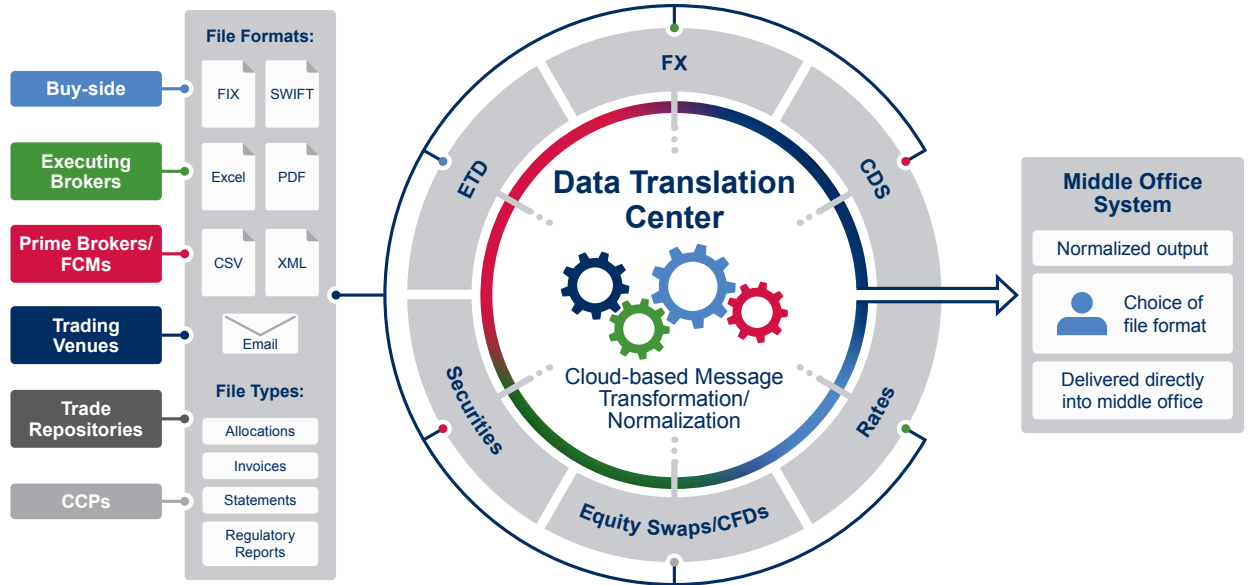

Data Translation Center is an automated, cloud-based message transformation and normalization solution – enabling Banks, Prime Brokers, Executing Brokers, Clearing Brokers, FCMs, Venues, Repositories and Buy-side firms to streamline pre- and post-trade processing across asset classes. By removing the possibility of manual error and reducing timelines, the solution drives efficiencies, delivers cost savings and minimizes risk. The process of interpreting counterparty data into a desired and standardized format integrates seamlessly into an STP workflow, while requiring no change to or engagement with the data itself.

Data Translation Center is delivered via Traiana's trusted, secure and established cloud network, Harmony. With over 2,000 connectors already built to exchange data, the offering translates FIX, SWIFT, Excel, PDF, CSV, XML and Email – freeing up operational resource while simultaneously improving risk management.

Data Translation Center Messaging Transformation

Universal

Communicate seamlessly with a global community of over 1,000 market participants across asset classes.

Resilient

Traiana's robust, scalable infrastructure processes over 20 million messages a day across trades, allocations, transactions, reports, invoices, and statements.

Cross-Asset

Streamline messaging and collaborate with counterparties across the full range of asset-classes and instruments, including FX, ETD, CDS, Securities, Equity Swaps, CFDs and Rates.

Efficient

Bring message translation and normalization into an automated and streamlined workflow, reducing the cost, time and risk of error.

Easy to Implement

Delivered via Traiana's secure cloud, Harmony, Data Translation Center is easily implemented and integrated with existing solutions.
