

Traiana™

In the middle of the markets, at the heart of innovation.

NetLink

Compressed trades and higher STP through one connection.

NetLink is the robust, scalable, market-leading post-trade solution for Prime Brokers, Retail Brokers and Liquidity Providers that aggregates retail trades to achieve up to a 99% ticket reduction, allowing participants to dramatically reduce costs, free up processing capacity and boost profitability.

NetLink reduces costs and decreases risk for market participants, compressing tickets in a controlled and automated environment by a proven 20:1 ratio. This ensures visibility into the original tickets (component trades) so that exposure can be managed.

The solution gives Prime Brokers and liquidity providers total visibility into component trades, enabling trades to be held outside of their environment while still allowing full risk control. Net tickets can be processed operationally, dramatically reducing costs.

Implementing, maintaining and monitoring the platform requires minimal IT investment. NetLink leverages Traiana's market-standard and cloud-based network, Harmony, which connects over 1,000 participants from both sides of the market, across asset classes.

NetLink drives efficiency, ensuring scalability. Costs and processing are contained regardless of volumes, allowing liquidity to be offered to as many platforms as is desired. External processing of component trades allows liquidity providers and Prime Brokers to alleviate capacity constraints, allowing for higher growth.

NetLink Workflow

Implementation

NetLink leverages Traiana’s robust and proven connectivity across the markets, ensuring that the solution is easily activated with low time-to-market.

Savings

The platform enables participants to make significant cost savings by submitting net tickets instead of component trades. Rules-based aggregation allows for maximum trade compression by a proven ratio of 20:1.

Visibility

Component trades remain fully transparent so that Prime Brokers can monitor and manage credit exposure without over-margining.

Real-time

The solution drives counterparties towards real-time reconciliation and speed-of-now notification of missing or mis-booked trades, resulting in higher STP and greater risk-management.

Scalable

NetLink is capable of growing to meet the needs of the markets both today and in the future, scaling to provide seamless automated aggregation of retail trades, regardless of volume.
